→ COLLECTION 2021

Deviating from your normal path, venturing into the unknown, travelling longer distances or simply challenging the daily traffic to reach the office. For Kappa it matters not. As the most important thing is that you do it in full comfort and safety and that you do it on two wheels, in your own individual way.

For the past 60 years, Kappa has devoted all its efforts to improving the lives of motorcyclists with roads, open spaces and horizons becoming the central characters. Our history, and that of our products, are merely a backdrop to each individual motorcyclist located around the World. Kappa choose to express and share its passion for two wheels by working relentlessly day after day, trip after trip for every product created and with every material used, devoting all our endeavours to those who live their lives on their motorcycle.

The passion, the attention to detail, and the precision that our team adopts in the creation of every single Kappa product is precisely the same procedure that a biker would adopt when choosing the finest accessories and products for their motorcycle. K-LAB is the location where Kappa tests and analyses its products taking them to the limit, whilst seeking valuable information to improve, innovate, rethink and continually suggest new ideas. The combination between K-LAB, with its modern crash test equipment and the co-operation of external laboratories, equipped with optical benches and spectrophotometers for the control of the Homologation of visors, enables Kappa to play a prominent role in the arena of research and the avant-garde world of security and comfort on two wheels.

Engineers and technicians analyse every driving situation, in every weather condition, for every kind of impact on a helmet, in order to obtain a level of absolute safety on the end product.

Young testers live the city, connecting their smart phones, filling and emptying their hard bags commuting to their places of study or work and having used and tested our products in their daily life, the products are returned to our lab where feedback and suggestions regarding the products are given to the Kappa Engineers with a view to further improving existing products and developing new ones. Thanks to the suitability of machinery and the high competence of its team, Kappa obtained the self-declaration in accordance with Regulation ECE/ONU 22-05, which enables them to perform internal inspections on production, distinguishing itself in its sector for the attention and passion dedicated to the optimal performance of their products. The experience and accuracy of a competent team, combined with the use of high quality materials, offers the biker an unequalled guarantee of safety, allowing them to disregard practical aspects and to fully enjoy the sensations that their passion provides
